

MY Report

1) first showing near by showing near by devices that's why it is showing tv, set up box, everything near me that's not ok because we are making only scooty app not Bluetooth connecting app see in original app this is the welcome page so below pics are the original apk features and welcome page after installation of the app so I want features like main navigation(google maps), ambient weather, weather alerts, traffic alerts turn by turn navigation(imp), trip records, I think that all will be managed by google maps, and that's it remaining features I have original just navigations I have problem. See how the original looks like I have showed everything hear. What permission asking and everything.

Customise which apps' notifications can be used by this app.

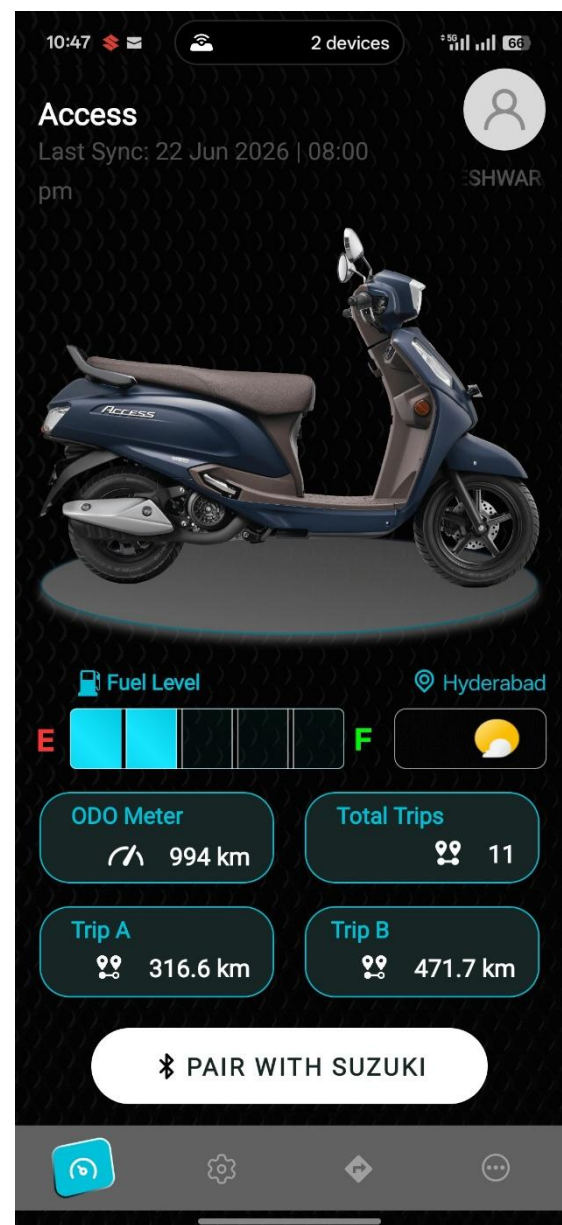

2) and next the Ui is like 🤢 same expression like ride disgusting like rideconnectx name is under the navigation bar like which app is like that and there is no option to dark mode still light. See this the welcome dassbord in original see myn also original is bad but we should do better

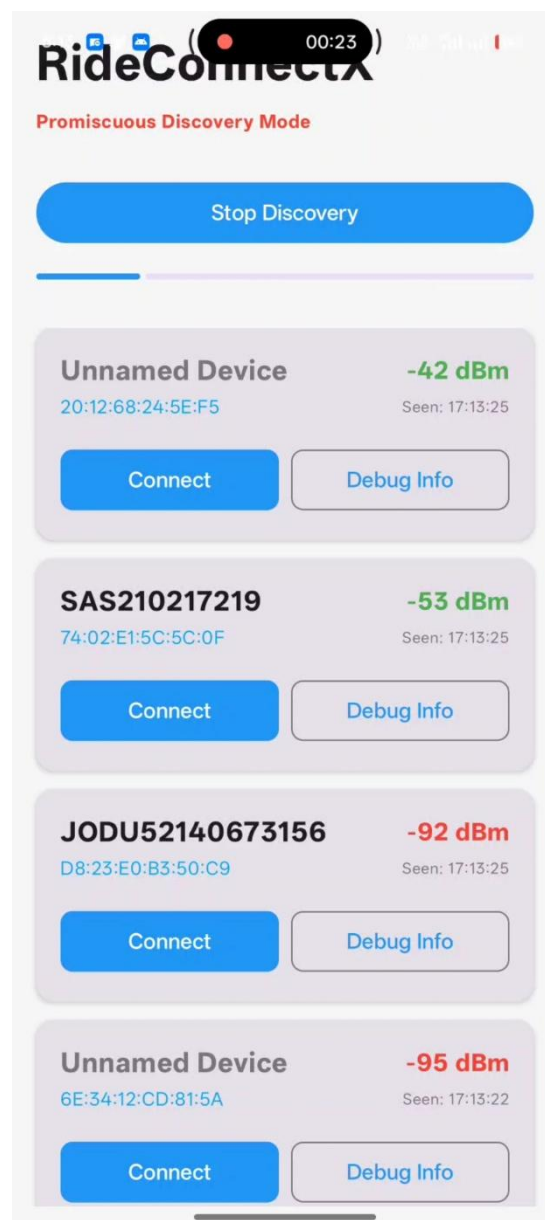

My app

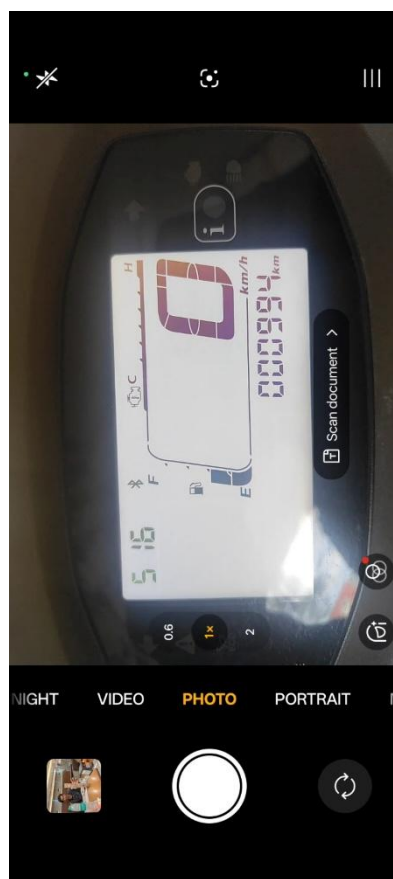

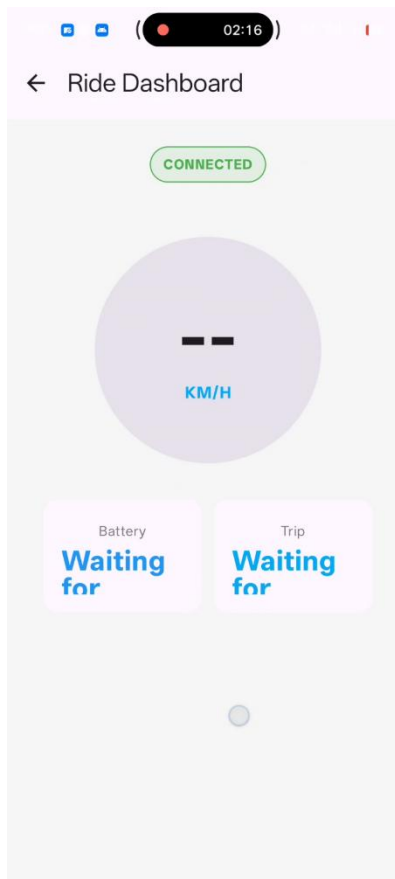

Suzuki app

3) And next is that when I start scan it is continuously scanning not stopping and next why the I am seeing max address and -48 dbm stuff and what is seen 17:13:19 original apk has just my scooty name shows like "SAS210217219" and why the heck is there debug info who needs that and if I connect to random one that shows in scan it is connecting I mean WHAT THE HECK how the heck I am connecting to all devices my supposed to connect my scooty like all supported Suzuki scooty like original one.

4) And what the heck is ride dashboard I see above original dashboard and one more thing app is still running and when I turn off the scooty it didn't reconnected when I offed the scooty it is connected. And after clicking connect button what the heck is this wating for whom he waiting for his mom 🤪 where is original app where is my app 🧑 and where is disconnecte option means once connected there is no disconnect wow chi and when I click back still I can see other devices and my connected device too and still I can see Bluetooth symbol in my scooty how the fuck man. And when I connect by my original app this it will show. See the difference. And if I connect the scooty in app and close form recents then also it is connected I can see the symbol of Bluetooth how who knows.

Till now this is start but I think this is end also I fucked up man. There is no single good in this ha but in one thing is good finding every Bluetooth device near me. That's why I told to copy whole means required thing from original and recreate it like we done no one will know.
